

## Senior Consultant – Regulatory and Policy

The ideal candidate will have developed expertise of issues relating to the development of market arrangements for gas and electricity trading, energy policy formation and analysis and regulation of utilities, network businesses and industry codes. Would consider an experienced consultant with relevant experience.

### ***Required skills:***

- Economic or Mathematic based degree (BSc, MSc or PhD);
- an excellent understanding of the legislative background, economic theories and concepts that apply to the operation, regulation and policy formation for the gas and electricity markets in GB, Ireland and across Europe;
- proactive approach with clients.
- highly numerate;
- excellent written English; and
- good report writing skills.

### ***Desirable skills:***

- European language.

### ***Required attributes:***

- a creative thinker with an ability to apply knowledge gained to develop creative solutions within the energy markets;
- strong team player to work with our dynamic and international group of experts;
- manages and maintains contact with clients to build strong relationships;
- proven project management skills;
- structures work plans with view of budget and resource;
- would relish the opportunity to apply extensive practical and theoretical knowledge of energy markets to develop successful, market based solutions in the evolving European energy environment; and
- looking for new challenges.

### ***Potential responsibilities within role***

- develop work on policy and regulatory issues in GB and wider European energy markets;
- take a senior role in the development of our ongoing policy and regulatory work in European energy markets;
- develop framework for quantitative analysis of the effectiveness of energy markets, particularly wholesale markets; and
- identify, analyse and resolve policy issues in energy markets.
