

A REPORT ON WIND PLANT OPERATION IN THE REPUBLIC OF IRELAND AND NORTHERN IRELAND

MARCH 2009 Edition

Expectations for the continuing growth of wind generation in RoI and NI appear to be justified. However the long-term market rules on the treatment of wind in the SEM continue to be up for debate.

Pöry Energy Consulting has been an expert in the Irish electricity market for over ten years. Our clients have included major utilities, finance houses, banks and public bodies.

We have recently developed an in-depth qualitative report on the **regulatory and commercial issues faced by wind plant in the SEM.**

The report is an invaluable tool for operators and developers wishing to understand the Irish market from the perspective of a wind plant.

Included within the report are the latest developments on:

- options for operation within the SEM and potential changes to market rules;
- REFIT – inc. self supply options;
- routes to market and potential embedded benefits; and
- other wind issues – inc. Gate 3 and Grid25
